TASK 1:

```
ores/Desktop/C3 ACTIVITIES/Act4_Abstraction_Flores.py"
--- Lab Inventory System ---
[pH Sensor] Reading: 7.2 pH (Neutral)
[Temperature Sensor] Reading: 24.5°C

----------------------------
PS C:\Users\Flores\Desktop\C3 ACTIVITIES>
```

TASK 2:

```
--- Lab Inventory System ---
[pH Sensor] Reading: 7.2 pH (Neutral)
[Temperature Sensor] Reading: 24.5°C

----------------------------

--- Testing Abstract Class ---
Traceback (most recent call last):
  File "c:\Users\Flores\Desktop\C3 ACTIVITIES\Act4_Abstraction_Flores_Task1.py", line 44
, in <module>
    my_sensor = Sensor()
TypeError: Can't instantiate abstract class Sensor without an implementation for abstrac
t method 'get_reading'
PS C:\Users\Flores\Desktop\C3 ACTIVITIES>
```

Final Checklist for KHub

- [/] Did you import ABC and abstractmethod?
- [/] Does the Sensor class have (ABC) next to its name?
- [/] Did you use @abstractmethod before defining get_reading in the base class?
- [/] Did you use super().__init__() if you added names to your sensors?
